Introduction

The idea for this atlas arose out of the first author's work as key adviser for the UKAID-funded Transforming Teacher Education and Learning (T-TEL) programme in Ghana. T-TEL had already produced a Google map, but the college locations were only accurate to town-level, and indeed sometimes inaccurate. Naturally, the T-TEL drivers do not all know the exact location of each college, which means that sometimes drivers had to look for colleges. Moreover, each "zone" (see below) was allocated a coach, who would visit each college in turn. Without accurate locations, advance route planning is difficult and overall trips are hard to optimise. It became thus desirable to not only obtain more accurate coordinates, but also to store these in publicly accessible platforms. In the period of the first author's role as key adviser to T-TEL (mid-2015 – end–2016), college coordinates were collected, and added to OpenStreetMap¹ and Google Maps, making the colleges discoverable by anybody and making strategic route planning possible. Using OpenStreetMap data offline (e.g. with the Maps.Me² Android/iOS application) meant that drivers could now also plan routes offline. Moreover, for the first author, collecting the coordinates of the colleges, and looking at the environments of the colleges (rural vs. urban, size, layout) was an additional way of acquainting himself with the colleges.

These ideas of course are not new. Free, up-to-date maps are recognised as a critical resource when relief organizations are responding to disasters or political crises, as evidenced by organisations like Map Action or Missing Maps, and the Humanitarian OpenStreetMap team (HOTOSM). For example, the latter provided maps during hurricanes in the Caribbean, earthquakes in Mexico, a volcano in Bali and flooding in South Asia. Likewise medically focussed research and relief efforts makes extensive use of geospatial data, for example during the Ebola crisis. There is also a culture of sharing data between crisis-focussed organisations; common platforms have been established which enable data sharing and re-use, including HDX³, the HOTOSM exporter⁴, and Health Sites⁵.

In the education sector, however, the use of geospatial data is not as well recognised, and certainly not as visible. For example, while some countries have got databases that provide school locations (alongside other data; e.g. USAID EdAssist in Zambia), many of those databases are not publicly available, and often have not been maintained. Similarly, many NGOs collect their own geospatial data, without sharing this further. While there are some early efforts to coordinate this (School Sites⁶; PROJECT CONNECT⁷US initiative) much work remains to be done.

Within T-TEL, having collected coordinates of the colleges, a further challenge presented itself. As T-TEL progressed towards more detailed planning of ICT in the colleges (throughout 2016), it became clear that only a very small number of colleges had campus

¹<u>http://www.openstreetmap.org/</u>

² <u>https://maps.me/download/</u>

³ <u>https://data.humdata.org/</u>

⁴ <u>https://export.hotosm.org/en/v3/</u>

⁵ <u>http://healthsites.io</u>

⁶ <u>http://schoolsites.io</u>

⁷ <u>https://www.projectconnect.world/</u>

maps. This raised the question how we could accurately plan and cost (for example) WiFi for the college campuses. In October 2016 an ICT survey of the colleges was undertaken by the National Council for Tertiary Education (NCTE, Ghana) with support from T-TEL. The survey was led by the 2nd author. We decided that during this survey, the NCTE also collected basic geospatial information, by asking college members to draw the boundary of the college, as well as label colleges buildings, on existing maps with satellite imagery (see below).

However, as the the first authors key adviser role came to an end in late 2016, it was unclear what would happen with this data, and how it could become useful to support education planning in Ghana. The first two authors decided that we would attempt to process the data in our own time, with view to making the data publicly available. The most efficient route for this seemed to continue using OpenStreetMap to trace buildings and roads within colleges. Because of our involvement with the Humanitarian Street Map team, we also involved a number of volunteers in this process, and started collaborating with the 3rd author. College data was entered into OpenStreetMap throughout 2017, with contributions at several Cambridge-based mapathons with contributions from Ghanaian mappers too.

While the full college data is available through OpenStreetMap, as well as available offline for mobile devices (with Maps.Me), we came to the conclusion that it would be helpful to produce a consolidated, printable atlas, that would raise awareness for the availability of this data.

While a few colleges had plans of their colleges, this atlas is the first comprehensive atlas of all public 40 Colleges of Education. As far as we know, the list presented in this atlas are is most complete and most accurate list of the forty College of Education in existence. This atlas also contains a description of how it was produced, and how it can be maintained.

The atlas was also an opportunity for the first two authors to continue collaborating as colleagues beyond the formal T-TEL programme setting in which they met, as well as to extend the collaboration to include civil society through the third author. We hope that we will have the opportunity to collaborate on many more projects in the future.

We make this atlas available because of our sincere wish to contribute to the development of the education in Ghana and to the wellbeing of the people of Ghana. We hope you find it useful.

December 2017

How was this atlas produced?

The Principles for Digital Development

There are many different approaches to collecting geospatial data. Our own efforts have been guided by the Principles for Digital Development⁸, which seemed particularly relevant as these have also been endorsed by the UK Department for International Development⁹. The nine principles are:

- **Design With the User.** User-centered design starts with getting to know the people you are designing for through conversation, observation and co-creation.
- **Understand the Existing Ecosystem.** Well-designed initiatives and digital tools consider the particular structures and needs that exist in each country, region and community.
- **Design for Scale.** Achieving scale requires adoption beyond an initiatives pilot population and often necessitates securing funding or partners that take the initiative to new communities or regions.
- **Build for Sustainability.** Building sustainable programs, platforms and digital tools is essential to maintain user and stakeholder support, as well as to maximize long-term impact.
- **Be Data Driven.** When an initiative is data driven, quality information is available to the right people when they need it, and they are using those data to take action.
- Use Open Standards, Open Data, Open Source, and Open Innovation. An open approach to digital development can help to increase collaboration in the digital development community and avoid duplicating work that has already been done.
- **Reuse and Improve.** Reusing and improving is about taking the work of the global development community further than any organization or program can do alone.
- Address Privacy & Security. Addressing privacy and security in digital development involves careful consideration of which data are collected and how data are acquired, used, stored and shared.

⁸ <u>https://digitalprinciples.org/</u>

⁹ Putting digital principles into practice in our aid programmes. Frances Sibbet, Digital Service Lead, 10 November 2015.

https://dfid.blog.gov.uk/2015/11/10/putting-digital-principles-into-practice-in-our-aid-programmes

• **Be Collaborative.** Being collaborative means sharing information, insights, strategies and resources across projects, organizations and sectors, leading to increased efficiency and impact.

For the present atlas, the Principles were used as follows. We **designed with the user** and understood the existing ecosystem: through our prior collaboration between the NCTE and T-TEL, as well as with OSM Ghana, we got to know the actors (e.g. including vehicle drivers, infrastructure planners, etc), as well as existing initiatives and digital tools (such as OSM Ghana's use of OpenStreetMap). We **design for scale and built for sustainability** by using an existing open, scalable platform (OpenStreetMap), where data will reside for the foreseeable future. We deposited OpenStreetMap data with the NCTE. While our initiative as such was not **data driven**, we collected (and quality assured) our data so that is readily available to those who need it, for example utilising multiple platforms, such as Google maps and OpenStreetMap, as well as offline through Maps.Me¹⁰, an open source application. We used **open standards, open data** hosted in **open source** platforms (i.e. OpenStreetMap). The OpenStreetMap process itself is based on **reuse and iterative improvement.** We did consider **privacy & security** in collecting our data. We aimed to **be** collaborative, working across the organisations of the three authors, immediately shared any collected data (through Google Maps and OpenStreetMap), utilising open licences (Creative Commons Attribution ShareAlike and the Open Database Licence) benefitting from the OpenStreetMap platform and tools increase our efficiency and impact. The font used for the text and tables is the open source Ubuntu font¹¹.

Initial data collection: Locations of the colleges

Initially the available data for the colleges was limited to postal addresses, as well as zones. Some of the the list available to us often contained errors, such as spelling errors. Some colleges were available on Google Maps, while others were available on OpenStreetMap; however, this was often under previous names (e.g. as "teacher training college", rather than the present name usually involving "college of education"). Also colleges were sometimes referred to by the nicknames or locations, which for those of us new to the Ghanaian colleges, made for a steep learning curve. It thus seemed to be a good idea to start cataloguing the available information.

This cataloguing also included collecting of the geolocations of the colleges. As the authors travelled between colleges, it was simple to collect geolocations by phone. Other geolocations were contributed by colleagues or college staff. This task was by no means trivial, and took several months. Often data had to be corrected. However, we are now satisfied that the data presented in this atlas is indeed accurate, and therefore presents a high value dataset.

The tables in the next section provide

College name (the full official college name);

¹⁰ <u>https://github.com/mapsme/omim</u>

¹¹ <u>https://design.ubuntu.com/font/</u>

- Zone (one of the five zones, which appear to be mainly used in education);
- Region
- District / Municipal / Metropolitan;
- Town;
- College name (the usual name, often a slightly abbreviated version of the full name);
- Nickname (the college nickname, usually an abbreviation created from the college name);
- Notes on other nearby colleges as well as pronunciation.

As far as we know, the data presented in this atlas is the most complete and accurate list of the forty College of Education currently in existence.

Satellite mapping to add buildings and roads

Once the locations of the colleges were known, the usual OpenStreetMap process could be used to trace satellite imagery. This was initially undertaken by the first author, usually choosing colleges visited personally, and gradually adding data (for example while travelling). However, this progressed slowly, and only led to additional data for a limited number of colleges.

Field mapping to determine college boundaries

In October 2016, the NCTE-led ICT survey of the colleges offered an opportunity to collect more accurate data. Prior to the survey, we produced maps suitable for annotation¹². During the survey visit to a particular college, basic geospatial information was collected. A college member would to draw the boundary of the college on to the annotatable paper map, as well as label college buildings..

We were not able to process this data immediately, but in early 2017 we transferred the college boundaries onto OpenStreetMap. Many colleges have boundary walls, are bounded by roads, or there is other structures delineating the college; for most colleges the information from the ICT survey was thus just needed to locate the appropriate boundary on the satellite image, allowing the precise mapping from the satellite image. However, for some colleges there is no visible boundary, and in some cases college staff was not able to indicate a precise boundary in some directions (for instance in cases where the college leads onto open fields). Those segments of the boundary were mapped approximately.

The mapping of the college boundaries was a significant step, as it allowed us to invite others to map those precise areas, for example during so-called "mapathons".

¹² See e.g. <u>http://fieldpapers.org/</u>

Mapathons to add buildings and roads

As the college mapping proceeded slowly, we decided to see whether we could work with the Cambridge (UK) mapathons, organised by Missing Maps. Normally these mapathons map according to global priorities, and there are always mapping tasks are suitable for newcomers.

The colleges task is slightly more complex, as it utilises a variety of OpenStreetMap tags, and also utilises OpenStreetMap relations. It thus became an ideal "practice task" for more advanced mappers, and (based on the Cambridge mapathon experience) originated the idea of such practice tasks. They allow mapathon participants, who have gathered some experience, to progress towards more complex tasks, but in a fairly controlled environment. Because the task itself is low priority, it remains available for a while, allowing mappers to return to the task over time to practice their skills. This prepares such mappers for more advanced tasks, as they become available as higher priority tasks. In other words, it builds a group of mappers that is able to rapidly respond to more complex tasks, as these arise.

Another element of the practice tasks is validation. Mapping for Missing Maps has two stages: First, an area is mapped; then the area is validated by a separate person. Usually there is a scarcity of validators. One of the reasons for the practice tasks was thus also to allow mappers to build their skills as validators — again, within tasks that are lower priority, allowing a shallower learning curve.

The task for mapping the colleges on the HOT Task Manager is still available¹³, for those who are interested. With the task being available on the Task Manager, it also became possible for contributions from the wider Missing Maps community. However, the main work happened during several Cambridge mapathons (mid to late 2017), sometimes with Ghanaian volunteers mapping in parallel. The remaining validation was then undertaken by the authors.

Tracing building outlines from satellite data was greatly aided through the availability of DigitalGlobe imagery for mapping in OpenStreetMap (announced 9th May 2017). Some of the existing satellite imagery had been of poor quality, and the new DigitalGlobe imagery allowed us to fill the gaps.

Printing PDFs

OpenStreetMap site. Once the colleges were mapped and validated, we used the OpenStreetMap site to produce individual PDFs, with scales 1:4,000 and 1:2,000 for most colleges (when printed on a4 paper). For some colleges a map at 1:8000 was added, to show the full college are on one A4 sheet of paper. The output map scale depends on the viewport (set to 1685 x 1190 for our maps, with settings z=17 and input scale 1,2000), and the zoom factors (z=18 or 17, and 16 for the largest scale maps). The input map scale

¹³ <u>https://tasks.hotosm.org/project/3296</u>

affects label size (set to 1:1000, 1:2000 and 1:2850 in our cases). With these two settings, map pages were exported to PDF individually, and then collated.¹⁴

	ΑΡΙ	Road width adjust	Scale bar	Scale settin g	PDF outpu t	PDF is vector	Multi- page	Free
OSM	No	No	No	Yes	Yes	Yes	No	Yes
Fieldpapers	"can" ¹⁸	No	No	No	Yes	No	Yes	Yes
inkatlas	Yes	Yes	Yes	Yes	Yes	No	Yes	No
MapOSmatic	Planned	No	Yes	Yes	Yes	Yes	Yes ¹⁹	Yes

Other options. There are various options for printing, for instance including Field Papers¹⁵ (as above, which is particularly useful annotation), MyOSMatic¹⁶ (which offers a scale bar as well), as well as InkAtlas¹⁷, which we have compared below.

InkAtlas has the advantage that the scale can be specified exactly (like the OSM site) and (at the time of writing) it is the only site that offers an API²⁰ (as part of the paid subscription). The Inkatlas team generously gave us free access to Inkatlas and the API, enabling us to produce the atlas pages using Inkatlas.

Document assembly

The introductory text for this atlas was collaboratively written in Google Docs and exported to PDF, then combined with the map PDFs to produce a single document. The PDF merge was produced with the community-version of Coherent PDF (cpdf).²¹

¹⁴ See <u>http://bjohas.de/wiki/Maps/Exporting_PDF_from_OSM</u> for details.

¹⁵ <u>http://fieldpapers.org/</u>

¹⁶ <u>http://maposmatic.osm-baustelle.de</u>

¹⁷ https://inkatlas.com/

¹⁸ See "Make a canned atlas template", <u>http://fieldpapers.org/make-canned-atlas-template</u>

¹⁹ At present MapOSmatic can only produce multi-page atlases covering reasonable areas. It does not seem to be possible to produce an atlas covering large areas, e.g. a road atlas of Ghana.

²⁰ <u>https://inkatlas.com/docs/</u>

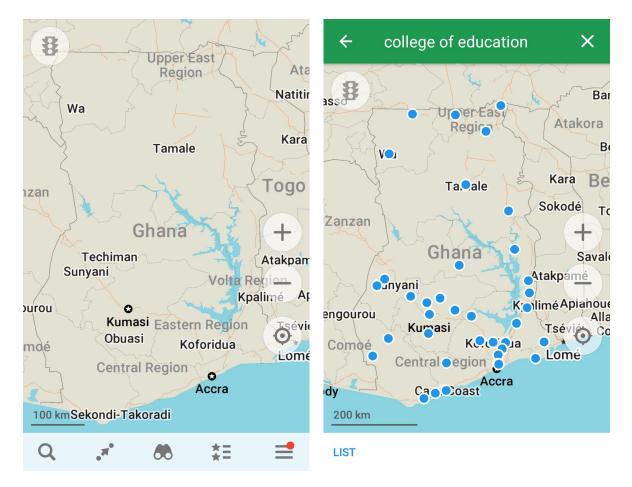

²¹ http://community.coherentpdf.com/, https://github.com/johnwhitington/cpdf-source

Obtaining and using the data in this atlas

This geospatial altas data is stored in OpenStreetMap, and is available to all users of OpenStreetMap. The college locations were also added to Google Maps, to make the colleges discoverable there.

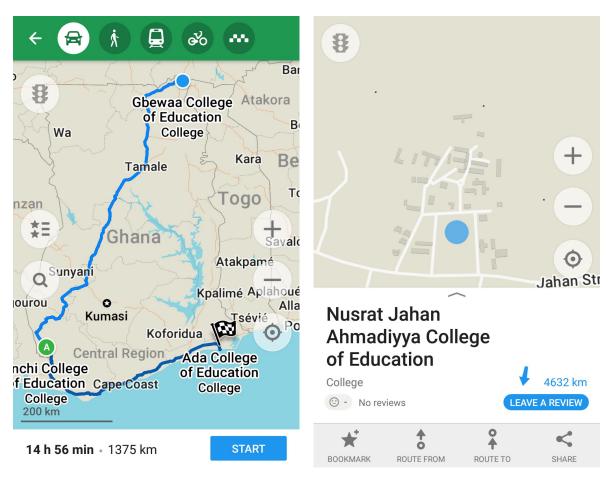

Using the atlas data on a mobile device

There are several applications enable the convenient use of OpenStreetMap data, including using this data offline. This section contains a few images of using the college data in the Maps.Me²² app, which is available for both Android and iOS.

This image shows the whole of Ghana. The red dot indicates that a map update is available for download. If you already have Maps.Me installed, with an older data download, you should update. This image shows the results of a search for "college of education". The results can be viewed on a list, or shown on the map (see image). Each blue dot represents a college, that can be tapped for adding a bookmark, or route planning.

²² <u>https://maps.me/download/</u>

This image shows a route planned from Gbewaa College of Education, via Enchi College of Education, to Ada College of Education. This image shows details of Nusrat Jahan Ahmadiyya College of Education. The details for every college (as also shown in the pages to follow) are available via Maps.Me.

Obtaining a copy of this atlas

The atlas itself and the data presented in these tables are available in digital format here at this url

http://bjohas.de/atlas2017

Details are on how data can be retrieved from the OpenStreetMap (for example via the OpenStreetMap API or the the Overpass API) are also available at the above URL.

Feedback and future efforts

The authors would love to hear from you! If you are just finding the atlas useful, if you have questions or suggestions, if you have spotted a mistake, if you want additional features to be added, or if you need help using the atlas at your college, please get in touch, using this form:

http://bjohas.de/go/atlasfeedback

The form requires an email address and optionally you can provide a phone number. We look forward to hearing from you.

There are many further tasks, including educational mapping and otherwise. In the area of college mapping, our data is reasonably complete at this point in time. For some colleges the outlines are certainly imprecise, and they will need amending. If you are staff or student at one of the colleges, please check your map, and get in touch.

Moreover, we have not yet labeled individual buildings, which makes for an ideal task for future mapathons. The present data will no doubt need to be amended. Also, the atlas only covers the 40 public colleges (as of mid-2017), and there are more colleges in transition, and data would need to be added as those colleges become public colleges. For instance, in September 2017, Al-Faruq College of Education was accredited by the National Accreditation Board. We know the college is located between Wenchi and Droboso²³, but did not have time to determine the missing data. If you are at Al-Faruq College of Education, or any of the other newly accredited colleges, do get in touch.

For the colleges, we also organised the Wikipedia entries²⁴ that were already available (4 colleges), we created Wikipedia pages for the remaining 36 colleges. The pages are basc at the moment ("stubs"), but they do provide another entry point for our data. By creating Wikipedia pages for a college, the college map becomes available in the WikiMiniAtlas²⁵, which is available directly from the corresponding Wikipedia page.

A similar mapping effort could be made for other educational institutions, such as other colleges (e.g. health) and indeed universities. However, an important future mapping task is to map schools. Initial efforts are being made in that area²⁶, but there is much more data that could be released or be added. Currently this data has not been widely added to OpenStreetMap, which would be helpful for public/offline access, as well as to offer a separate data store.

We hope that this atlas will inspire more contributions in these areas!

²³ Google Maps indicates the position here, but we have not been able to independently confirm the exact GPS coordinates:

https://www.google.co.uk/maps/place/Al-faruq+College+Of+Education/@7.7108681,-2.1053232,45 9m

²⁴ <u>https://en.wikipedia.org/wiki/List_of_colleges_of_education_in_Ghana</u>

Appendix 1: Attribution

Licence for this atlas

This atlas as a whole is available under Creative Commons Attribution-ShareAlike 4.0 International.

Björn Haßler, Jacob Tetteh Akunor, Enock Seth Nyamador (2017). *An Atlas of The Forty Colleges of Education in Ghana*. Available under Creative Commons Attribution-ShareAlike 4.0 International. Available at <u>http://bjohas.de/atlas2017</u>.

The inside front cover has further details on this licence, and the pages below explain licences for the maps. The licence means that you can share the whole atlas in any medium or format. For example, you can print it, email it to others or place it onto your website. You are also welcome to adapt the atlas, as long as you are mindful of the licence conditions (attribution, share alike), see inside cover.

Overall contributions

Much of the college data was collated by the first author, drawing on various sources. The early collection of data was inspired by T-TEL²⁷, supplemented by information from the National Council for Tertiary Education²⁸. The National Accreditation Board²⁹ listings were also helpful to validate our data. District / town information was checked against Statoids Districts of Ghana³⁰ and Wikipedia³¹.

Contributions via the HOTOSM tasks manager and OSM

The following users contributed to this project³² on the HOTOSM tasks manager:

CycleStreets, Enock4seth, Fraser Donaldson, Hannah F, Harry Wood, Paul David baron Von Weenraid, bgirardot, bjohas, fenfe1, tomad, tpfd.

These are listed separately, because (e.g. for validation) they are not recorded within OpenStreetMap itself.

²⁷ See e.g. <u>http://www.t-tel.org/about/coes-network.html</u>.

²⁸ <u>http://ncte.edu.gh/, http://www.openstreetmap.org/way/339022390</u>

²⁹ <u>http://www.nab.gov.gh/public-colleges-of-education</u>

³⁰ <u>http://www.statoids.com/ygh.html</u>

³¹ <u>http://www.wikipedia.org</u>

³² <u>https://tasks.hotosm.org/project/3296</u>

Mapathons in the UK were supported by the first author, while the third author coordinated mapathons in Ghana. The Ghana postcodes³³ were generated by Patrick Agyei (Youth Mapper, UMAT).

Further contributions were made by OpenStreetMap users directly via OpenStreetMap, particularly prior to our project. This is information is available on OpenStreetMap.

The Inkatlas team³⁴ generously gave us free access to Inkatlas and the API, enabling us to produce atlas pages using Inkatlas.

Contributions to Wikipedia

The first and third author also created pages for 36 colleges on Wikipedia; only 4 already had pages on Wikipedia, which were amended as needed. Wikipedia automatically loads data from OpenStreetMap to generate the WikiMiniAtlas, which means that the map data is also available via Wikipedia.

Akrokerri College of Education

From Wikipedia, the free encyclopedia

Akrokerri College of Education is a teacher education college in Akrokerri (Adansi West District, Ashanti Region, Ghana).[1] The college is located in Ashanti / Brong Ahafo zone. It is one of the about 40 public colleges of education in Ghana.^[2] The college participated in the DFIDfunded T-TEL programme.^[3]

³⁴ https://inkatlas.com/

Appendix 2: College data

The data presented in these tables is also available in digital format (see <u>http://bjohas.de/atlas2017</u>). It is licensed under the Open Database License (details below). The first double page contains:

- **College Name (official).** The full official college name.
- Zone / Region / District / Municipal / Metropolitan / Town. The physical location of the college. This is not the postal address (usually a PO box); those are readily available from the NAB site.
- **College name (usual).** Often the full college name is slightly shortened, to produce the usual name of the college.
- Nickname. All colleges have a nickname/acronym, provided here.
- **Notes.** For some colleges there are are brief notes on variants in the name and pronunciation; nearby colleges are also indicated.

The second double page contains:

- Location (WGS84). GPS coordinates of the visual centre of the college.
- **Google map area.** Google maps link to the GPS coordinates.
- **Google map search.** Google maps search for college name, to verify that the college is discoverable on google maps.
- Location link (Google). Google maps link to college and coordinates, to provide a good view of the college in Google Maps.
- **OSM relation.** The number of the college 'relation' on OpenStreetMap. The relation groups all college-related objects together, useful for performing statistical analysis on the OSM data.
- **OSM relation link.** Link to OpenStreetMap relation, for inspection.
- JOSM edit link. Link for editing the OpenStreetMap relation in JOSM.
- **Open Location Code (full).** The full Open Location Code.
- **"Plus code" URL.** Link to <u>https://plus.codes</u>, to view the OLC in relation to nearby OLCs. College may wish to adopt an OLC that points to the main administrative building or the college entrance.
- **Google map, full OLC.** Search on Google Map for the code, to show how the code can be utilised.
- **One degree prefix.** The first four characters of the code, which corresponds to a one degree area (100km at the equator.)
- Short Open Location Code. An OLC can be shortened by providing a reference to a nearby town. E.g. for "6FV2CF68+QR", the one degree prefix "6FV2" can be dropped if the town is included, i.e. "CF68+QR Jasikan, Ghana". This provides a postcode-like system.
- Google map, short OLC. Google Map search to verify the short OLC
- **Ghana postcode.** In 2017, Ghana introduced a postcode system. Those postcodes are provided for reference.

#	College Name (official)	Zone	Region	District / Municipal / Metropolitan

Licence for the college data

The data presented in these tables is also available in digital format (see <u>http://bjohas.de/atlas2017</u>). Our data collection and the content is licensed as follows:

These list of data for the Colleges of Education (Ghana) is made available under the Open Database License:

<u>http://opendatacommons.org/licenses/odbl/1.0/</u>. Any rights in individual contents of the database are licensed under the Database Contents License: <u>http://opendatacommons.org/licenses/dbcl/1.0/</u>.

Note in particular that the licences assert that factual information is not covered by copyright. The Contents are licensed by the Licensor "as is" and without any warranty of any kind.

Under this licence, you are free:

- **To Share**: To copy, distribute and use the database.
- **To Create**: To produce works from the database.
- **To Adapt**: To modify, transform and build upon the database.

As long as you:

- **Attribute**: You must attribute any public use of the database, or works produced from the database, in the manner specified in the ODbL. For any use or redistribution of the database, or works produced from it, you must make clear to others the license of the database and keep intact any notices on the original database.
- **Share-Alike**: If you publicly use any adapted version of this database, or works produced from an adapted database, you must also offer that adapted database under the ODbL.
- **Keep open**: If you redistribute the database, or an adapted version of it, then you may use technological measures that restrict the work (such as DRM) as long as you also redistribute a version without such measures.

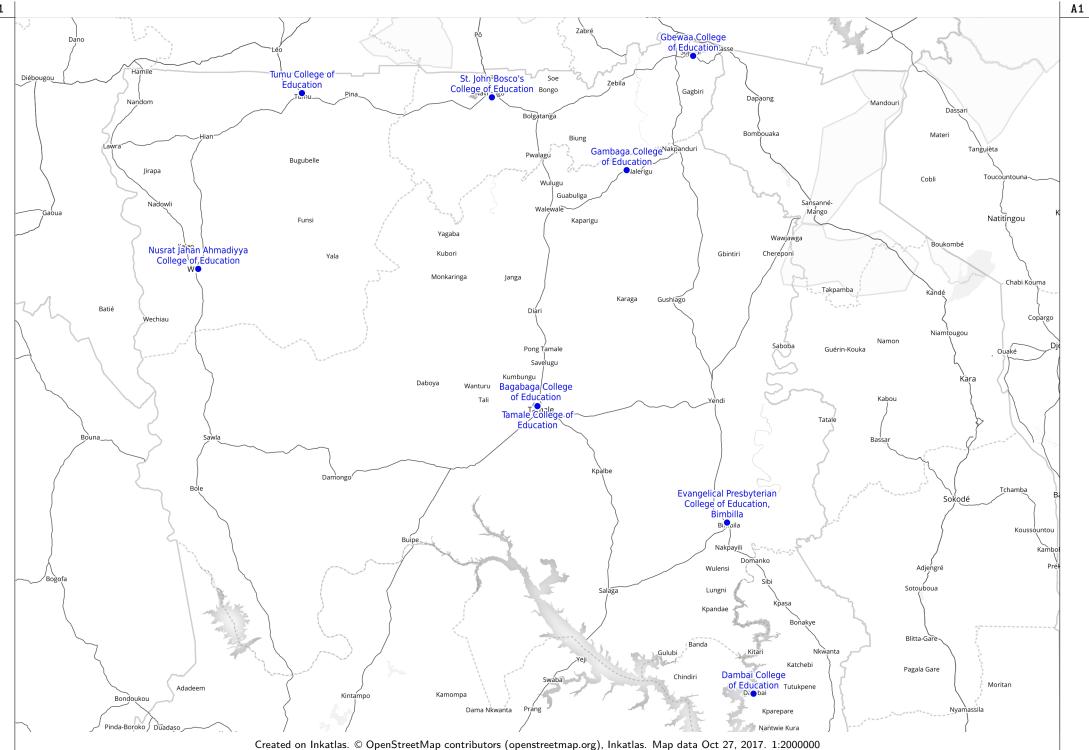

Disclaimer

This text is not a license. It is simply a handy reference for understanding the ODbL 1.0 — it is a human-readable expression of some of its key terms. This document has no legal value, and its contents do not appear in the actual license. Read the full <u>ODbL 1.0 license</u> <u>text</u> for the exact terms that apply.

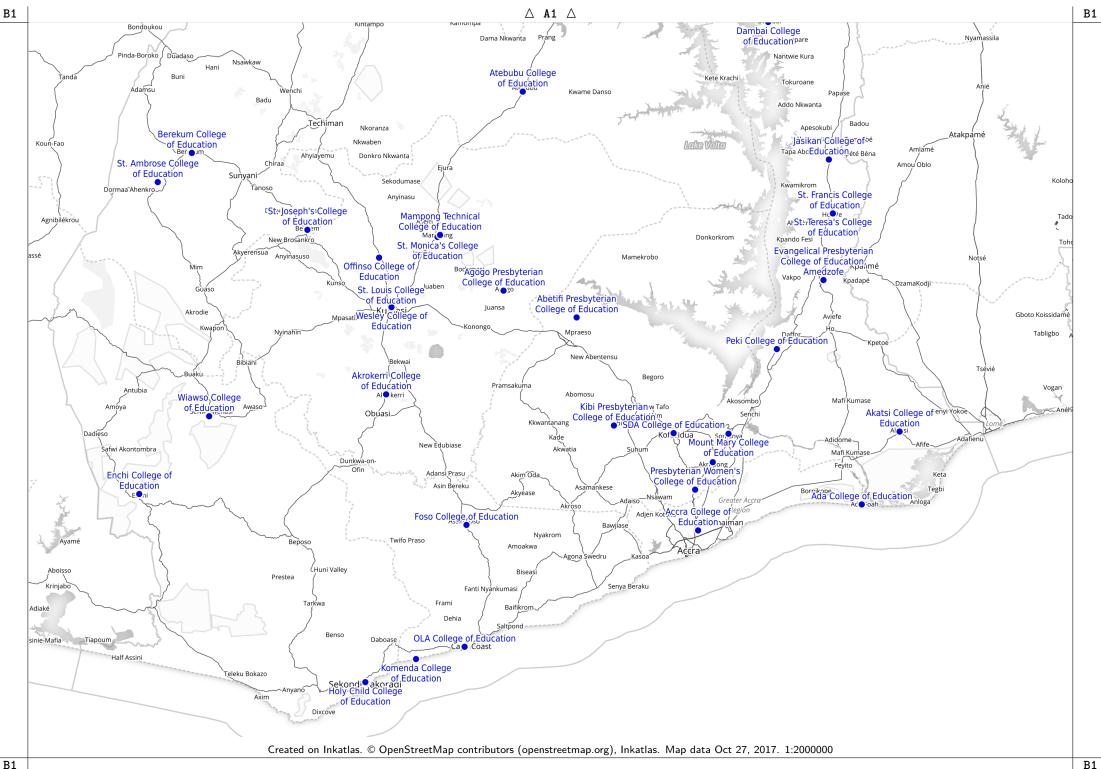

Appendix 3: Overview map of the colleges

The following double page provides an overview of the locations of the 40 colleges. Alternative versions of this map (including different colour schemes) are available at <u>http://bjohas.de/atlas2017</u>.

A1

Licence for the overview map

You should not the following licence terms:

This map was produced using OpenStreetMap®. The copyright of the data for this map belongs to the OpenStreetMap contributors. The data is made available as open data (under the Open Data Commons Open Database License) by the OpenStreetMap Foundation. **You are free to copy, distribute, transmit and adapt our data, as long as you credit OpenStreetMap and its contributors.** If you alter or build upon our data, you may distribute the result only under the same licence (ODbL).

The cartography is licensed under the Creative Commons Attribution-ShareAlike 2.0 license. You are free to copy, distribute, transmit and adapt our maps, as long as you credit OpenStreetMap and its contributors. If you alter or build upon our maps, you may distribute the result only under the same Creative Commons licence. The full legal code explains your rights and responsibilities, see http://www.openstreetmap.org/copyright.

And the following notes:

The PDFs were produced using the <u>https://inkatlas.com/</u> API. For further information, and for attribution, use <u>http://bjohas.de/atlas2017</u>.

Appendix 4: College maps

The following pages contain maps of all forty colleges. The scales are 1:4,000 and 1:2,000 (where two maps are present). For some larger colleges, a view at 1:8,000 is also included (plus a fourth map, either at 1:4,000 or 1:2,000) to maintain sets of 2 or 4 maps.

On each page, underneath the college name, coordinates are provided in the format

zoom/lat/lon, e.g. 17/6.66639/-0.73969

which can be used to locate the area on OpenStreetMap, e.g.

http://www.openstreetmap.org/#map=17/6.66639/-0.73969

Underneath the coordinates, the scale is provided (when printed on A4), as well as the area covered by a full A4 sheet (1:2,000 \rightarrow 542m x 420m; 1:4,000 \rightarrow 1,084m x 840m; 1:8,000 \rightarrow 2,168m x 1,680m). In other words, the actual distance left-to-right on an A4 landscape page (271mm) is roughly 0.5 km, 1 km and 2km.

Each page is built from with scalable vector data. This enables large scale printing for individual pages for college use. For large scale printing (e.g. on A3 or A2, the scale is reduced accordingly).

Licence for the college maps

You should not the following licence terms:

This map was produced using OpenStreetMap®. The copyright of the data for this map belongs to the OpenStreetMap contributors. The data is made available as open data (under the Open Data Commons Open Database License) by the OpenStreetMap Foundation. **You are free to copy, distribute, transmit and adapt our data, as long as you credit OpenStreetMap and its contributors.** If you alter or build upon our data, you may distribute the result only under the same licence (ODbL).

The cartography is licensed under the Creative Commons Attribution-ShareAlike 2.0 license. You are free to copy, distribute, transmit and adapt our maps, as long as you credit OpenStreetMap and its contributors. If you alter or build upon our maps, you may distribute the result only under the same Creative Commons licence. The full legal code explains your rights and responsibilities, see http://www.openstreetmap.org/copyright.

And the following notes:

The PDFs were produced using the <u>https://inkatlas.com/</u> API. For further information, and for attribution, use <u>http://bjohas.de/atlas2017</u>.

The license terms are printed in each page, which means that you can extract single pages and print and share them digitally, without needed to add further attribution.

Abetifi Presbyterian College of Education
