About this document

This is an example document to illustrate Creative Commons licensing and best practice publishing, including upload to document repository (Zenodo). It does not cover other important aspects of publishing, such as bandwidth considerations (optimising files for download over slow, intermittent, expensive connectivity) or general accessibility features (e.g. adding document structure, numbering sections and pages, adding text- and audio- descriptions to images). At present, the document also does not provide a rationale for the recommendations.

Recommendations

To ensure maximum use, reuse and distribution of your documents, the following recommendations seem appropriate.

- 1. Explicitly licence the document, by including a Creative Commons statement.** Give preference for Creative Commons Attribution or Creative Commons Attribution ShareAlike; do not make it complex for your users by using a complex licence or a custom licence. A minimal licence statement (as shown above) is sufficient. However, sometimes organisations include the “human-readable summary” of the licence, to alert users to their rights. This might also include a “recommended citation” (see below) as well as a “non-endorsement” statement.
- 2. Include a suggested citation in the document.** The Creative Commons licence requires acknowledgement, so user will want to acknowledge use. To make this

easy for the users, and to ensure that your document is uniformly cited, include a suggested citation.

3. **Do not add protection to the PDF.** Any protection added will make your document less usable. If you want to ensure the integrity of the PDF, publish an MD5 hash alongside it. (If you upload to Zenodo, see below, you get this for free.)
4. **Do not just publish the PDF, publish your sources.** Alongside your PDF document, publish the sources (e.g. Word, OpenOffice, InDesign, ...). If your sources are in a specialist format (e.g. InDesign), consider exporting to Word. (If you design your workflow right, this will hardly taken any effort — speak with your designer.)
5. **Add a DOI to the document.** Register a DOI for your document, and include in your document. This gives the document a unique digital identifier, that can be used to retrieve the document, and the metadata for the document. This makes your document more citable (and ensuring the correct attribution to you and your organisation), and thus more people become aware of it, and it gets used more.
6. **Publish soon and comprehensively.** If in doubt (and there are no privacy/confidentiality concerns), publish your document. Publish a draft. Any useful annexes or tabular data? Publish.
7. **Share the document: Upload the document to the web.** Make the document available on the web, rather than in a non-public place.
 - a. Upload to more than one public place, for example upload the document to the website of all organisations that were involved in creating the document.
 - b. Upload the document to Zenodo, an archive offering long-term archiving and preservation: <https://zenodo.org/deposit/new?c=publicgoods>. If you know of other, equally robust repositories, managed by a major international organisation, then additionally upload there.
 - c. If there are other knowledge stores, do deposit the document there. This could include file share on the intranet, institution archives (e.g. DSpace). However, this should not be the only place where you publish them.
 - d. Email the softcopy to everybody who was involved with the production of the document. For research documents, this would also include participants in the research — this is a [research] ethics consideration, as well as simple courtesy.
8. **Include a copyright statement.** Including a copyright statement is helpful in case a user would like to acquire rights that go beyond the Creative Commons licence.
